

# Inventory transfers made easy breezy

Who knew receiving a NetSuite transfer order could be so easy?

## Don't want to use

### NETSUITE in store?

Pay for every user

Hard to learn for every user

## Just create transfer orders in NetSuite

Like your inventory planning team is used to

## HotWax Receiving App

Use the easy to learn, iPad first receiving app at stores

Embed it right into Shopify POS

## Built for store teams

View current inventory while receiving to optimise put away operations

Real time progress tracking that's easy to understand, full size images and mandate scanning

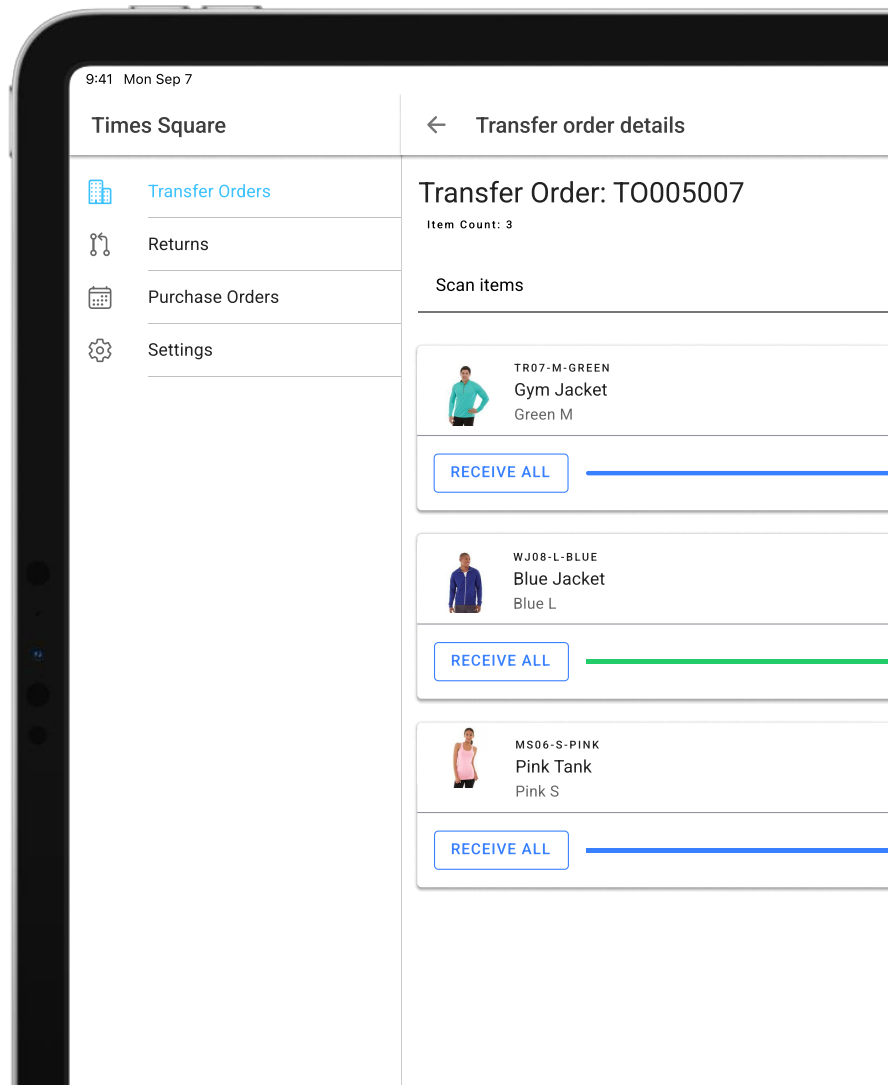

## Then what do you use?

Tons of spreadsheets

No scanning just creates inventory discrepancies

## And sync them to HotWax

HotWax auto syncs TOs from NetSuite for stores to receive

Require scanning

## No receiving app? That's just worse.

Inventory is stuck at stores until receipts are uploaded manually

## Update inventory everywhere

HotWax automatically updates inventory counts to Shopify & NetSuite, no blind spots

## What about exceptions?

Submit type forms to head office every time there is an under receipt or mis-pick

## Like mis-picks?

HotWax lets you scan & receive items that were not supposed to arrive

## Or under & over receipts

Reconcile discrepancies reported by stores and action on them in NetSuite
