

The HotWax Commerce platform has been designed to be adaptive to very specific enterprise needs, without add-ons or costly customizations. Based on the powerful Apache OFBiz® framework, the platform offers easy configuration and agile deployment. Unlike proprietary systems which predefine and limit the way your business operates and grows, the open core HotWax Commerce platform is technology agnostic - so you **never get stuck in a "black box" that wasn't made for your business.**

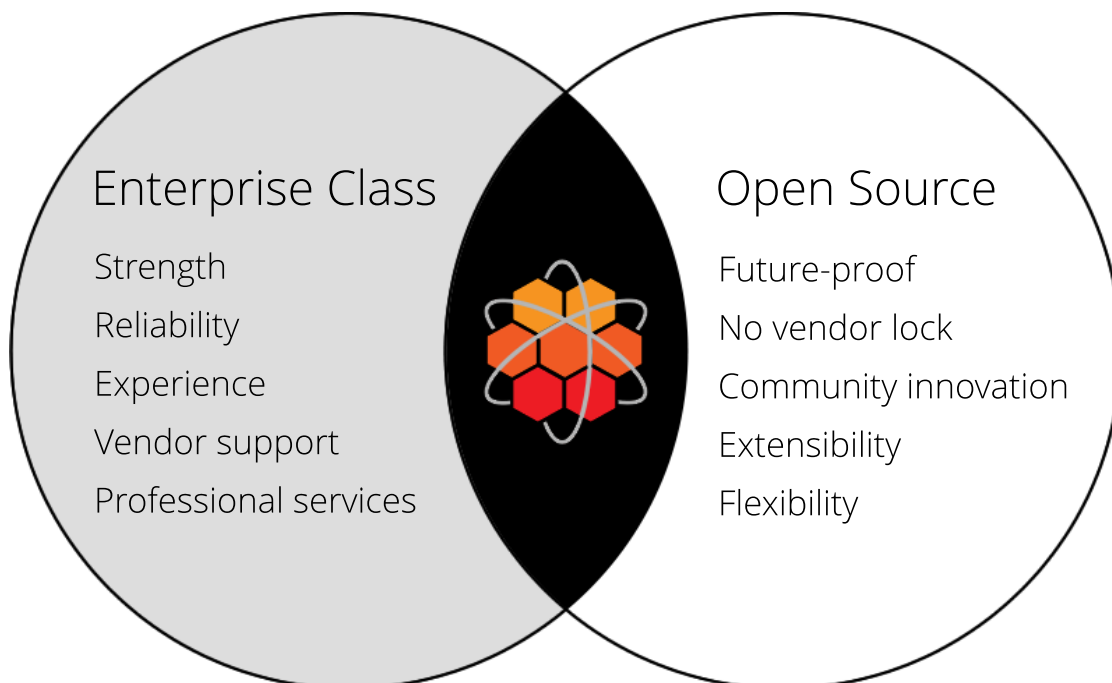

The unified suite of business applications is flexible enough to be used across any industry, but tailored to benefit complex commerce operations. A common architecture allows developers to **easily extend or enhance** it to create custom features, and a universal data model allows for a single source of truth across a business. The HotWax Commerce platform is intrinsically engineered to support the highest standards in PCI compliance and GDPR best practices.

- ▶ Agility & Adaptability
- ▶ Application Integrity
- ▶ Data Security
- ▶ Extensibility
- ▶ Availability
- ▶ Scalability

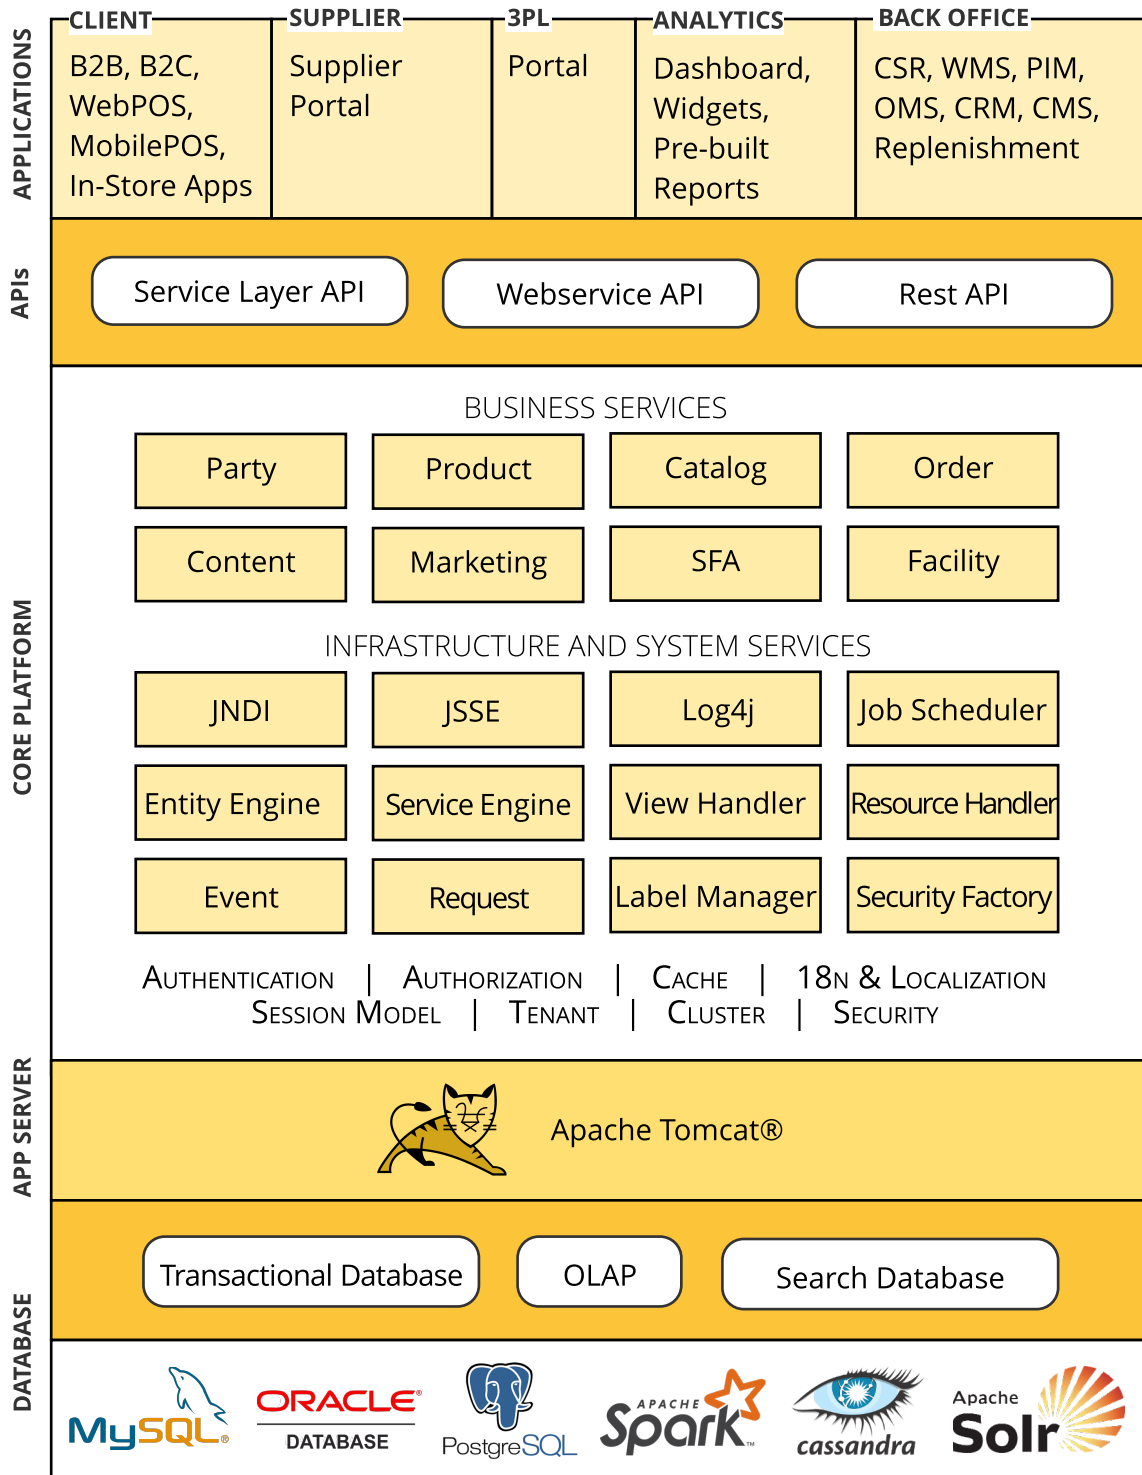

The Best of Both Worlds

Leverage the strengths. Alleviate the weaknesses.
